Doctors of Optometry examine the eyes and related structures to detect the presence of vision problems, eye diseases and other abnormalities. For more information about the profession and schools, visit www.opted.org.

ACADEMICS + ACTIVITIES = OPTOMETRY SCHOOL PREPARATION
These classes and activities will answer “Why Optometry” and prepare you for success in optometry school and your career.

**Academic Preparation**
Academic preparation for optometry school requires a Bachelor’s degree and completion of a set of prerequisite classes, usually science, which vary from school to school. Common classes are listed on the last page of this summary. For your degree, any major is appropriate. There is no preference in this regard, so study something you love! Competitive applicants have high grades so pace yourself in order to succeed, and remember that all grades will count when you apply even if you repeat classes.

**Service to the Community**
Because you are preparing for a humanitarian profession, it is important to have volunteer experiences that demonstrate a commitment to serving others in your community. It is suggested that this be ongoing throughout your college years prior to application for admission.
- Lowell Bennion Community Service Center [http://bennioncenter.org](http://bennioncenter.org)

**Patient Exposure**
Interacting well with patients is one of the key indicators of a successful future provider. The most common way to have this experience will be working at an optometrist’s office, which provides direct care to patients.

**Leadership Experience**
As an optometrist, you will be a leader and a team member with your patients, your staff, your colleagues, and in your community. Examples of leadership includes offices in organizations, leadership in church activities, coordinating a project, serving on a committee, managing or training or supervising at work, teaching experience of any kind, coaching, peer counseling, mentoring, etc.

**Why Optometry?**
Physicians depend on medical literature to remain current in their field throughout their careers. Most medical schools required or highly recommend participation in research that tests a hypothesis. Your research experience can be from many different areas. It does not have to be medically related or in a lab.
- Undergraduate Research Opportunities Program (UROP) [http://our.utah.edu/](http://our.utah.edu/)

Your research experience can be from many different areas. It does not have to be medically related or in a lab.
- Undergraduate Research Opportunities Program (UROP) [http://our.utah.edu/](http://our.utah.edu/)

**Shadowing**
This should be one of your first experiences as a premedical student. Observing a physician in action will help you gather the information you need to fully commit to the profession and to learn about a variety of specialties.

**Things to Remember**
- What you do outside of class is important so don’t neglect activities. However, remember that activities complement your coursework, but they will not compensate for low grades.
- Make sure you have contact information for supervisors and physicians in case you need a recommendation letter. Try to keep an open relationship with them after you discontinue activities.
- Keep a record of all hours of service and experiences. The PreMed Planner Spread Sheet on our website can help with this. You will find it on our website under Downloads.
- Writing reflections on each activity in a journal will be helpful when you complete your application and write your personal statement.

❖ OAT & GPA
Take the Optometry Admission Test (OAT) when you have finished the necessary coursework. The OAT is administered year around at Prometric Test Centers (SSB 490 @ the U, 801-581-7310). Taking the exam by spring will enable you to apply earlier. The OAT is divided into four sections: Survey of the Natural Sciences (Biology, General Chemistry, and Organic Chemistry), Reading Comprehension, Physics and Quantitative Reasoning. For more information about OAT exam, visit https://www.ada.org/oat/index.html. The exam can be taken unlimited times, but you must wait for at least 90 days between testing dates. The best strategy is to prepare thoroughly and take the OAT once.

Optometry schools look at GPA in 2 different ways; science and overall.

❖ APPLICATION PROCESS
All students who want to apply for optometry schools in the US, Canada and Puerto Rico must use centralized application service called OptomCAS. Some schools also require supplemental applications and additional fees. Even though many optometry schools do not require a bachelor’s degree, we strongly recommend students complete the degree.

❖ OptomCAS
The Association of Schools and Colleges of Optometry (ASCO) sponsors a centralized application service called Optometry Centralized Application Service (OptomCAS). It centralizes and standardizes your application information. Apply to the schools of your choice using OptomCAS at www.optomcas.org. Application requirements include transcripts, personal background information, recommendation letters, extracurricular experiences, personal statement and fees. OptomCAS will be available in mid July and end in mid May of following year. Because many schools use a “rolling” admission process (they begin reviewing applications and admitting before deadlines), it will enhance your chances if you submit your application early regardless of when you take OAT. Even if you do not have your OAT score by the time you submit your application, OptomCAS will process your application without the score. To help us advise students we would appreciate if you would release your information to the Health Professions Advisor. This information will always be kept confidential.

❖ WICHE
WICHE (Western Interstate Commission of Higher Education) enables Utah residents to enroll in out-of-state professional programs at reduced tuition. For more information about WICHE program in general, please visit http://www.wiche.edu/psep. In order to qualify for WICHE you must have been a resident of Utah for at least 5 years when you apply to optometry schools. In the summer when you apply to optometry schools you should also apply to be WICHE certified. Visit http://www.wiche.edu/psep/cert-off. The application deadline is October 15.
Letters of Recommendation (LOR)
OptomCAS recommend students to use their Electronic Letter of Recommendation service which allow letter writers to submit their letters online. Many optometry schools require letters from 1) optometrist and 2) academic professor (mainly science), but you can provide up to 4 letter writers. It is always a good idea to check with what your designated schools require. The more recent the letters, the better for your application.

< GET TO KNOW YOUR PROFESSORS BETTER! >
• Let professors know at the beginning that you would like them to keep an eye on your performance in class. It will give them a longer “observational window”. Visit their offices regularly and ask them for a letter at the end of the semester if you do well and they are agreeable.
• A key to a good letter is the establishment of a relationship between student and professor based on shared academic interests.
  - Ask thoughtful questions
  - Delve deeper into concepts presented in lectures
  - Share your academic and career goals
  - Ask for recommendations for additional reading
  - Inquire about their areas of interest and research
• After you have gotten to know professors, ask about further opportunities, e.g. teaching assistantships, individual research projects, etc.

< WHEN YOU REQUEST THE LETTER >
• Ask if the professor feels capable of writing a supportive letter. If not, you should probably try someone else.
• Remind the professor of topics, e.g. a project, a presentation or paper done for the class; a particular interest demonstrated in the class, or interaction you had with fellow students in the class.
• Ask if the professor would welcome written background material. You could include a brief biographical sketch, your interests and activities, career goals, and motivation toward your intended profession. You could also include a snapshot, copy of a paper written for that class, or transcript.
• Always give the professor ample time—two to three weeks minimum. Follow up to make sure that your letters have been sent. Send thank you notes.

# PreOptometry Science Course Guide

This guide is designed for applying to a *range* of medical schools. It is not a comprehensive list. Requirements may vary by school. Shading indicates the classes most commonly required by medical schools. See a PPA advisor for more information.

[Classes with * may be taken @ SLCC. However, not all medical schools accept prerequisites from 2 year schools]
